

American High School Science & Eco Club, Fremont

May the 4Rs Be With You Contest 2020

Regrow, Reuse, Recycle, Reach

Our 4Rs Reflection

Regrow is demonstrated as there is an included picture of our gardening team that helps utilize vacant land at American High School and donating the fresh produce that is grown to the culinary class

Reuse is a common practice that each of our members uses at home as well as in our club as we collect donated goods from our school and transform them into art or practical materials.

Recycle is a very important factor as we constantly sort recycled bottles from our school and prevent them from ending in the landfill by collecting them to be transferred to the recycling station instead.

Reach is a useful branch where we interact with community members, students, and other green activists as we participate in local environmental activities.
