May the 4Rs Be With You Contest 2021

**My 4Rs:** Revive, Replenish, Redo, Restart

## My (Re)Generation Action Story:

This shows that we are leaving a carbon footprint in the world, so the earth is having less and less space for animals and us to live, shown by the earth growing smaller.

My 4 R's are Revive, Replenish, Redo, and Restart. I thought of these 4 R's, because these are not only the 4 R's for this, they are the 4 R's for life. We need to redo the regeneration and help them know what to do about the problems in the world, making sure that they learn the right way to throw away things, like terracycling old candy wrappers, and using reusable materials, (reusable water bottles, bags, and more).

## Anjali's Story Continued:

We also need them to learn what needs to be done and how to do it right, (Restarting their knowledge, and erasing the false things they have learned). We need to revive the earth, and redo our thoughts about plastic. We need to replenish the earth (and the animals and plants on it), and restart our ways of fixing things in a good way, (not with more plastic).

This represents the 4 R's because it shows that the world will be stomped on and we are the only ones that can help it not. It will also soon be flooded with plastic and bad materials, (like in the background, there is a plastic bag), if we don't do something about it. The animals there will get hurt by the plastic, thinking it is food and eating it, when they can't digest it. This would be just as bad, maybe even worse, than poaching endangered species.

There is a slight blue tint to this picture, to show that we need to act now, and it shows a little bit of sadness. There is a glass cup around the earth's, showing that there is a cage that can be broken, but we all have to work together, to get the earth out of this trap. You can also see that the shoe is bigger than the earth, showing it has way more power.

The earth can't change us, but we can change the earth. I learned about this when my family and I took a trip to a National park, and they wanted us to know that we shouldn't leave a carbon footprint in world, because that will ruin the earth, and the life on the earth, and they were teaching us about the regeneration.

There is not much time before the earth will be ruined, so the regeneration is important. The regeneration can regenerate the almost broken, caged, earth, and replenish the animals and conditions that were there before all of the plastic and pollution.
