Honorable Mention Middle School Story Narrative

My (Re)Generation Action Story:

Food Share Project

We observed there is a lot of uneaten food wasted in the trash. This has a negative impact on our environment because food in the landfill releases methane. This causes climate change due to the greenhouse gasses created by food waste. In addition, we chose to make a food share cart because it helps reduce wasted food throughout our school. We used creativity in our project by creating posters showing the waste in our gray bin, and putting the posters around the school to spread awareness.
