

STOPWASTE

ETHAN W., PLEASANTON

May the 4Rs Be With You Contest 2021

My 4Rs: Regrowth, Rot, Regrow, Reprocess

My (Re)Generation Action Story:

My first R is regrowth. A sunflower starts of as a seed growing. The seed grows to a seedling. The seedling grows to a sunflower.

My second R is rot. The compost helps plants grow. If you put compost in the trash it will create methane. Methane is NOT good for the environment. Methane reduces oxygen in the air. You rot the flower. You get better soil. When the soil gets dirty. You rot it again.

My third R is regrow. When the sunflower dies a new sunflower grows. My 4th R is reprocess. The process keeps on repeating unless people who don't stop waste harms its life cycle.
