

When in Drought....  
Don't remove your lawn.

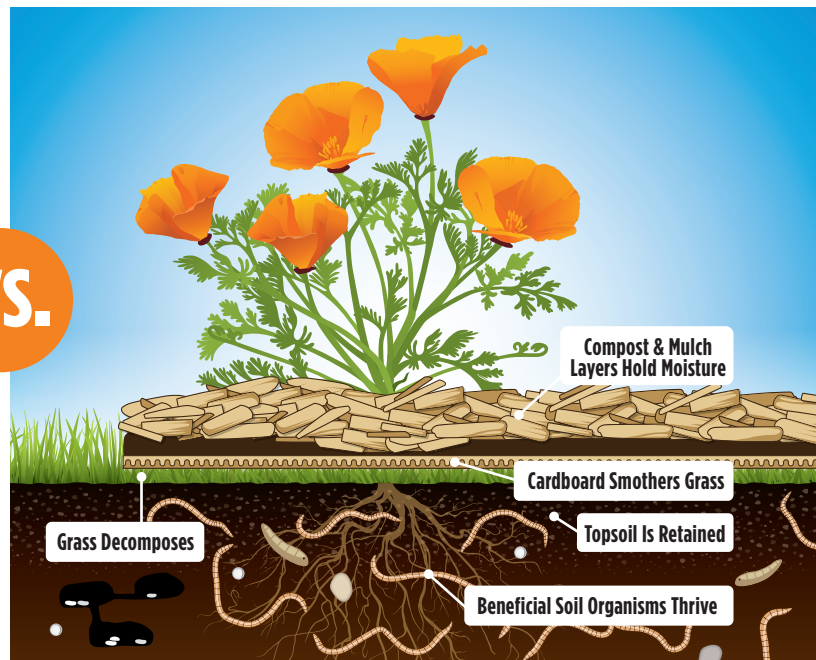

# SHEET MULCH IT!

Go from lawn to garden in three easy steps:

- 1 Cardboard
- 2 Compost
- 3 Mulch

## Conventional Lawn Conversion

## Sheet Mulch Lawn Conversion

+ **Saves water** if replaced with drought tolerant plants.

+ **Saves water** if replaced with drought tolerant plants.

+ **Saves even more water.** Organic matter in compost and mulch acts like a sponge to hold more moisture.

+ **Easier.** Don't have to dig out turf & suppresses weeds.

+ **SAFE for kids & pets.** No chemicals.

+ **Instant one-day transformation** to garden.

+ **Zero waste.** No sod goes to the landfill.

+ **Plants thrive** from the added compost and decomposing turf.

+ **Healthy soil.** Encourages earthworms and favorable soil organisms.

+ **Reduces runoff.** Increases water infiltration by 25%.

+ **Improves water quality.** Soil organisms found in organic matter break down pollutants.

+ **Climate friendly.** Reduces greenhouse gases by 53 tons per acre.
